

Sign In

Company logo at the top.
Sign in page.

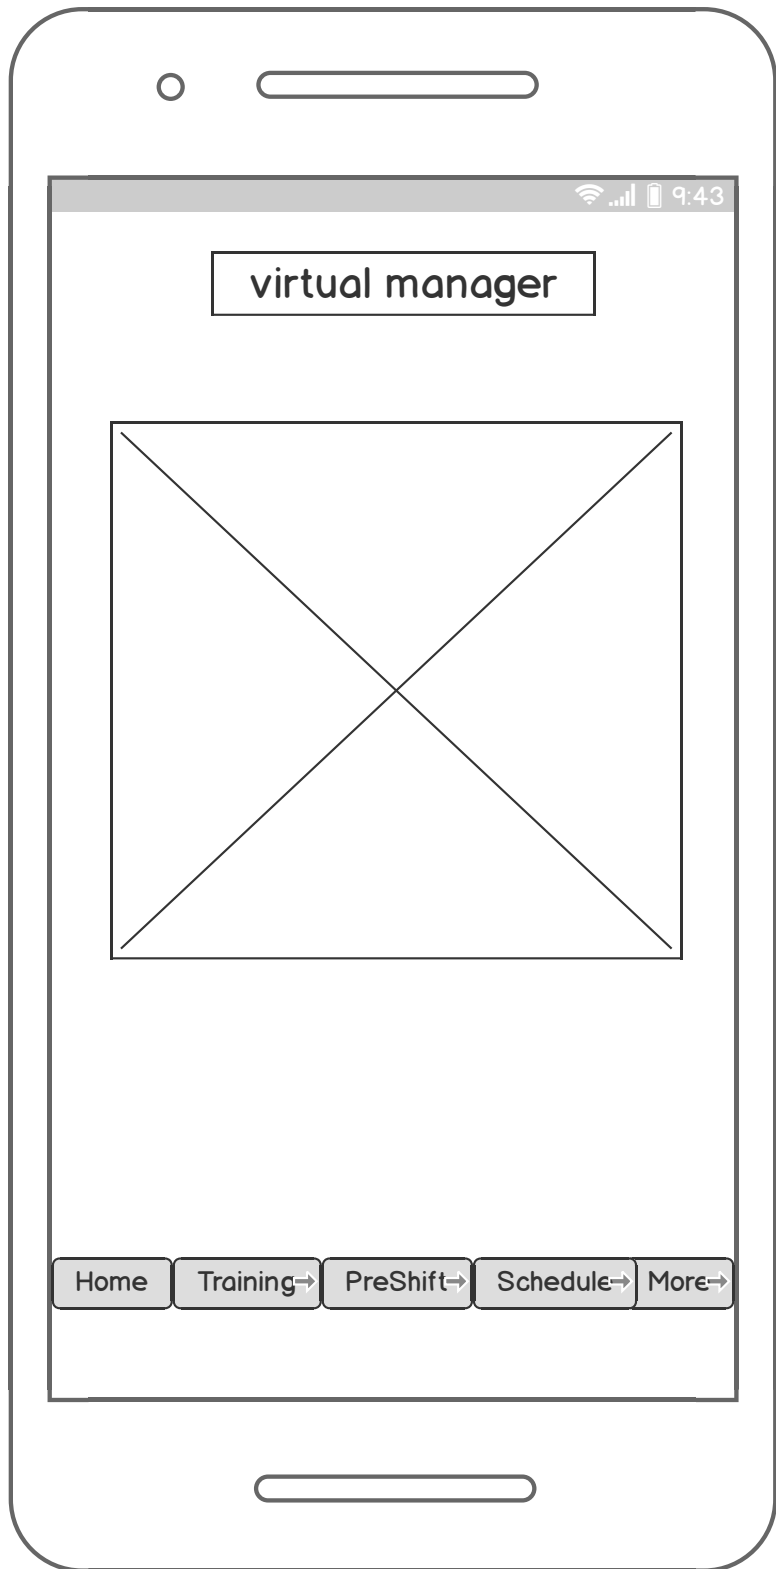

Drop down menu: Select EMPLOYEE (USER) or MANAGER (ADMIN).

Dynamic first time log in needed here: ADMIN (of MANAGER) needs to create an account, which links them to their unique USERS (EMPLOYEES)

**USER & EMPLOYEE profiles? How do we incorporate

ADMIN (A.K.A. MANAGER) log in will lead you to the ADMIN Menu. USER log in will lead you to the USER version; a way to read all of the files uploaded by the ADMIN.

ADMIN MENU

Manager Menu

Button 1: Home

Button 2: Training

Button 3: PreShift

Button 4: More

Home button could be omitted if a "Main Menu" button or link is incorporated into every page.

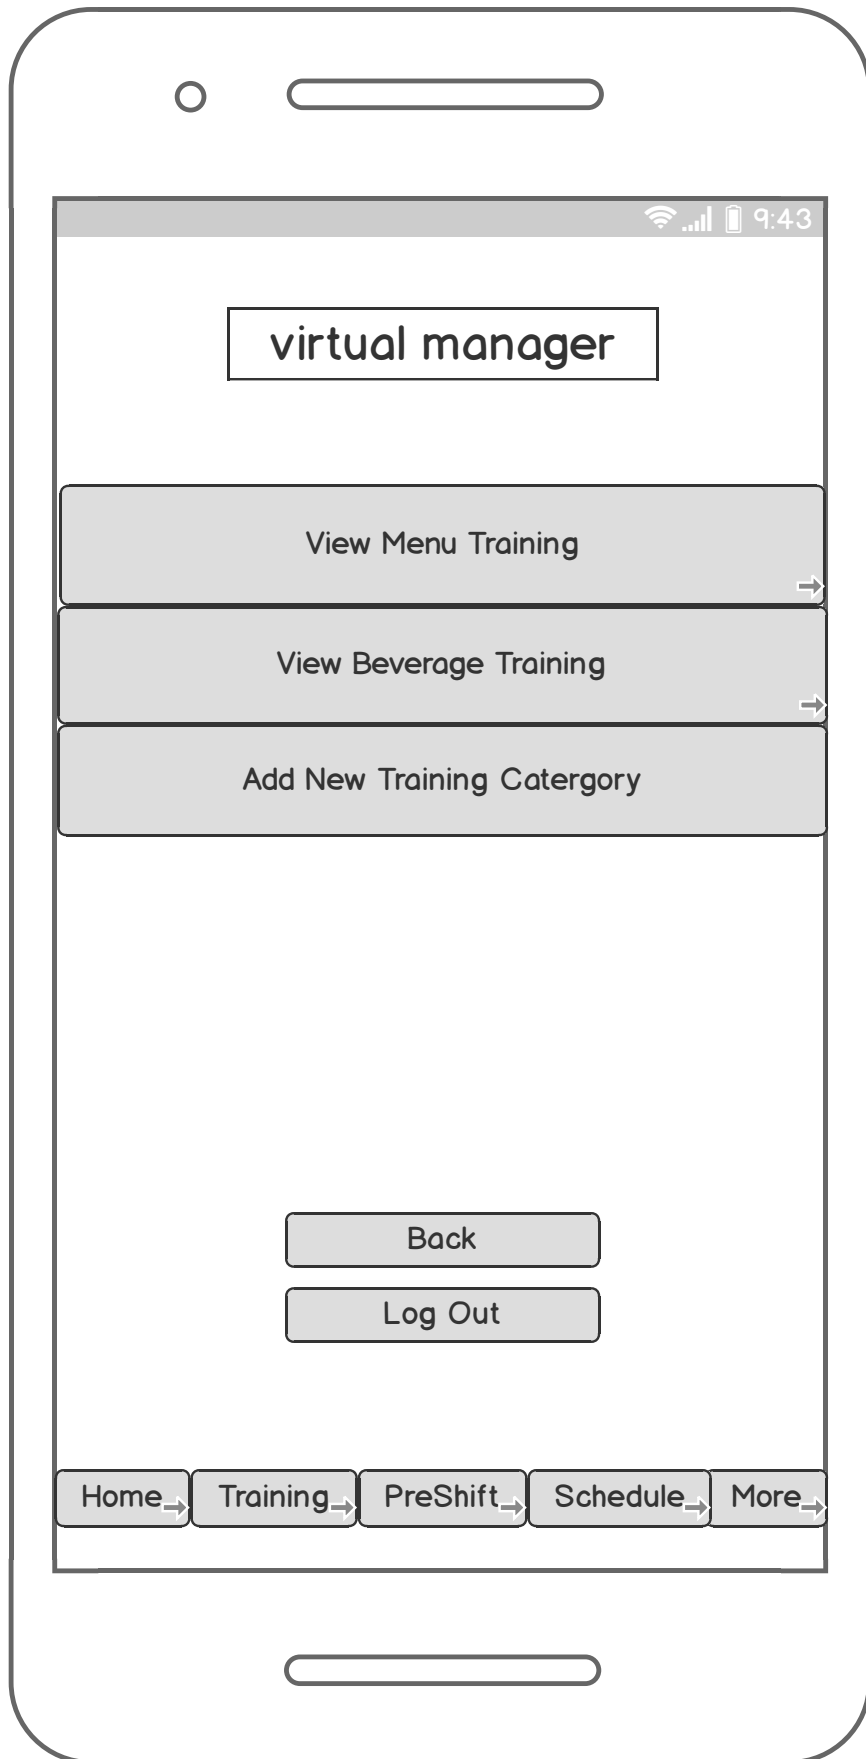

Buttons need to be changed to an icon with text. Looking to the developer to choose a stylish icon for this section.

Looking for smart, clean and easy to navigate design.

Logo in the middle of the page?

Better ideas for navigation design?

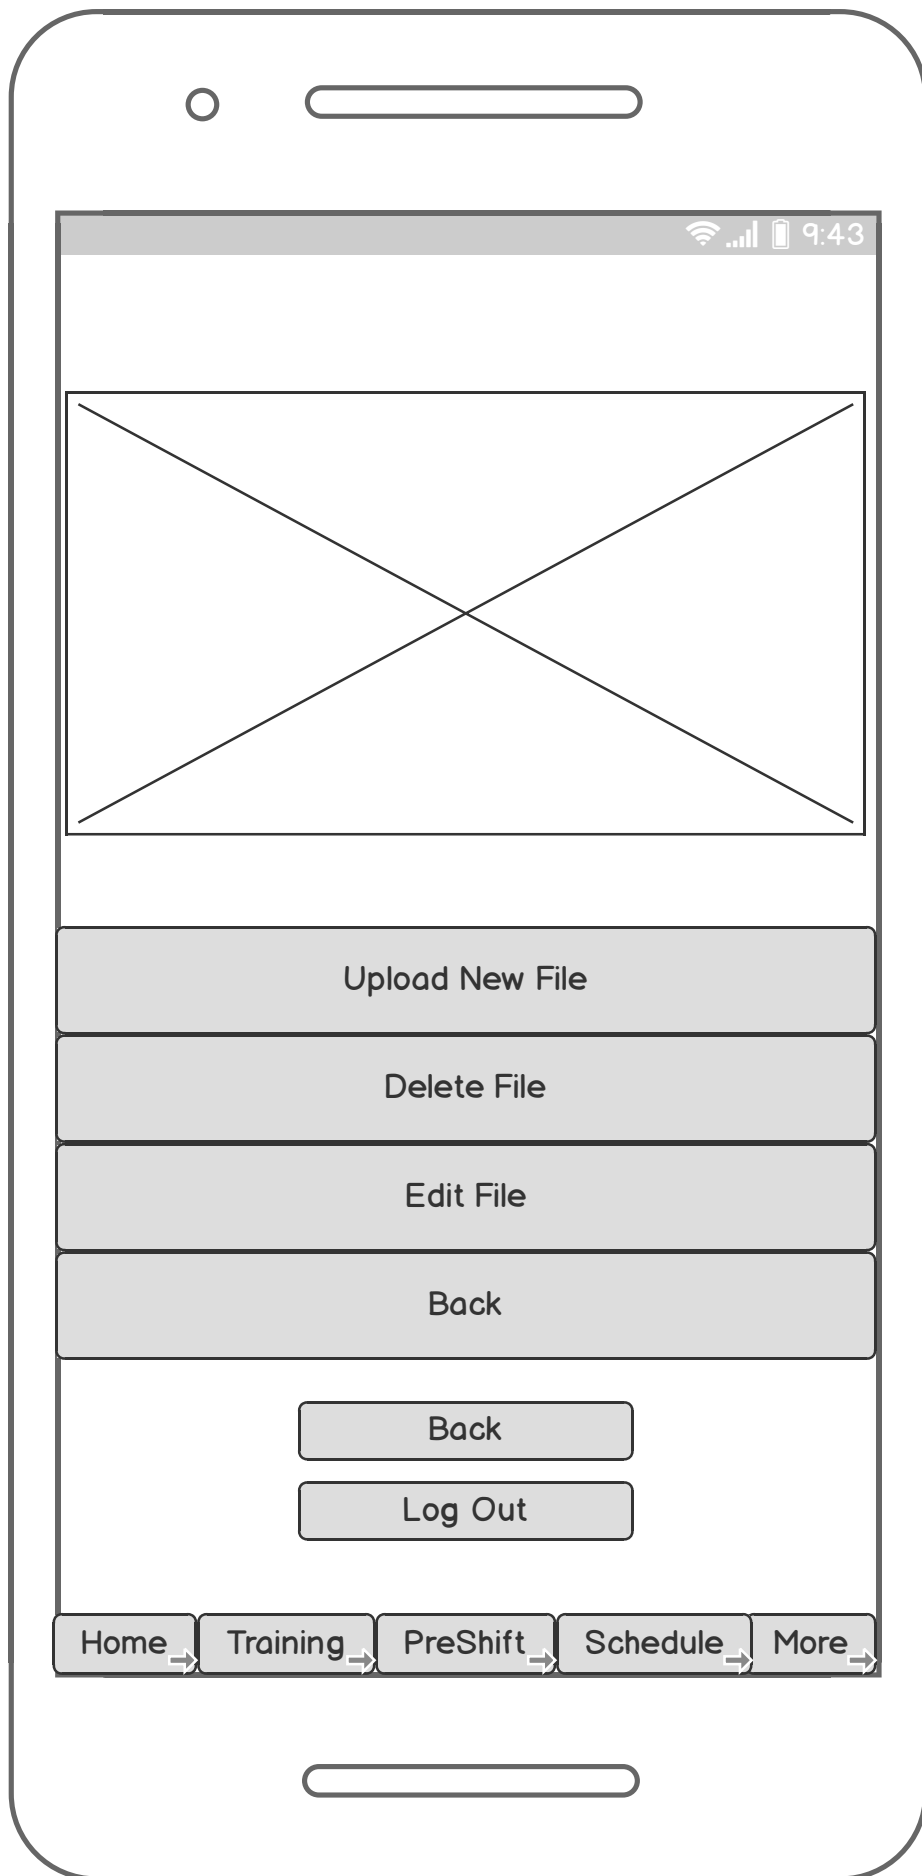

TRAINING - A

Page allows the "MANAGER", who is basically the ADMIN for that group of EMPLOYEES, to upload documents called "matrix"; training material for staff members (EMPLOYEES). this is currently done with volumes of distributed paper from a primitively designed excel spreadsheet. I wish to streamline this: upload into the app and push it out to EMPLOYEES digitally. "Add New Training Category" Adds another section, to be named by the ADMIN. These sections (Menu Training, Beverage Training) are simply places to upload and edit spreadsheets, documents and other text for distribution to the EMPLOYEES..

Dynamic design needed! The look of the app should be clean and easy to use.

View Menu Training - 1A1

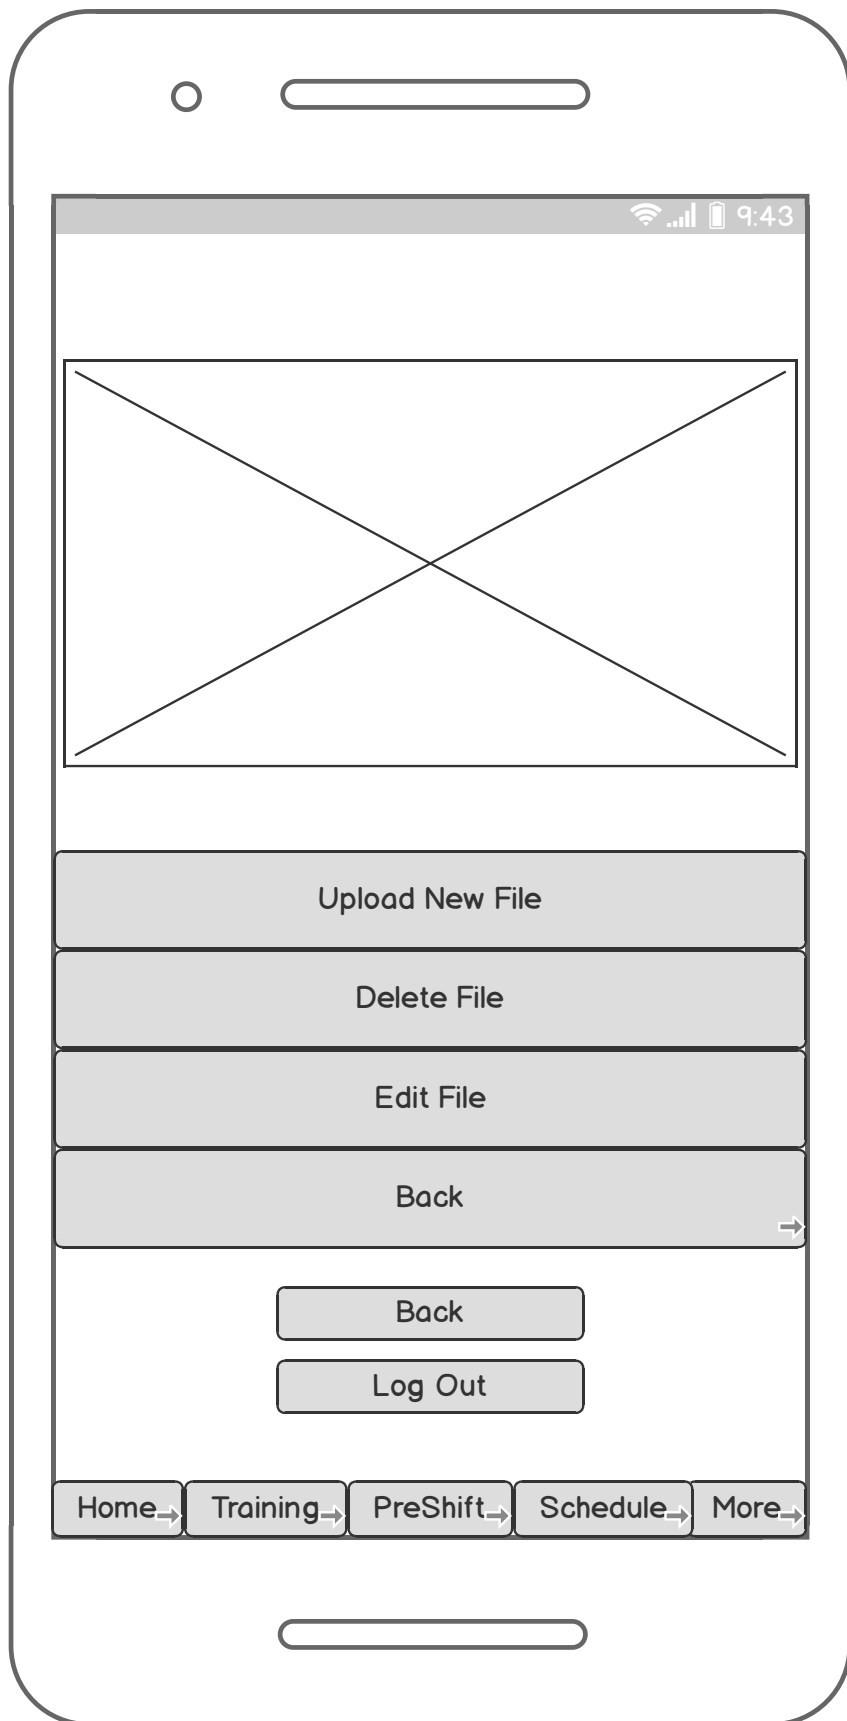

The MANAGER would be uploading a word doc, pdf or excel file here and pushing it out to their respective EMPLOYEES.

The view, like all images or files, needs to be dynamic: zoom and landscape viewing.

The MANAGER view would offer the option of uploading a new file or deleting the current file.

Version 1 of the app would be a simple uploading of a file. Version 2 will have an embedded spreadsheet that can be edited, sent as a pdf, etc.

View Beverage Training - 1A2

The USER or EMPLOYEE (same) view would be pdf or excel file known as a "beverage matrix (training aid)".

The ADMIN or MANAGER (same) view would offer the option of uploading a new file or deleting the current file.

Version 1 of the app would be a simple uploading of a file. Version 2 will have an embedded spreadsheet that can be edited, sent as a pdf, etc.

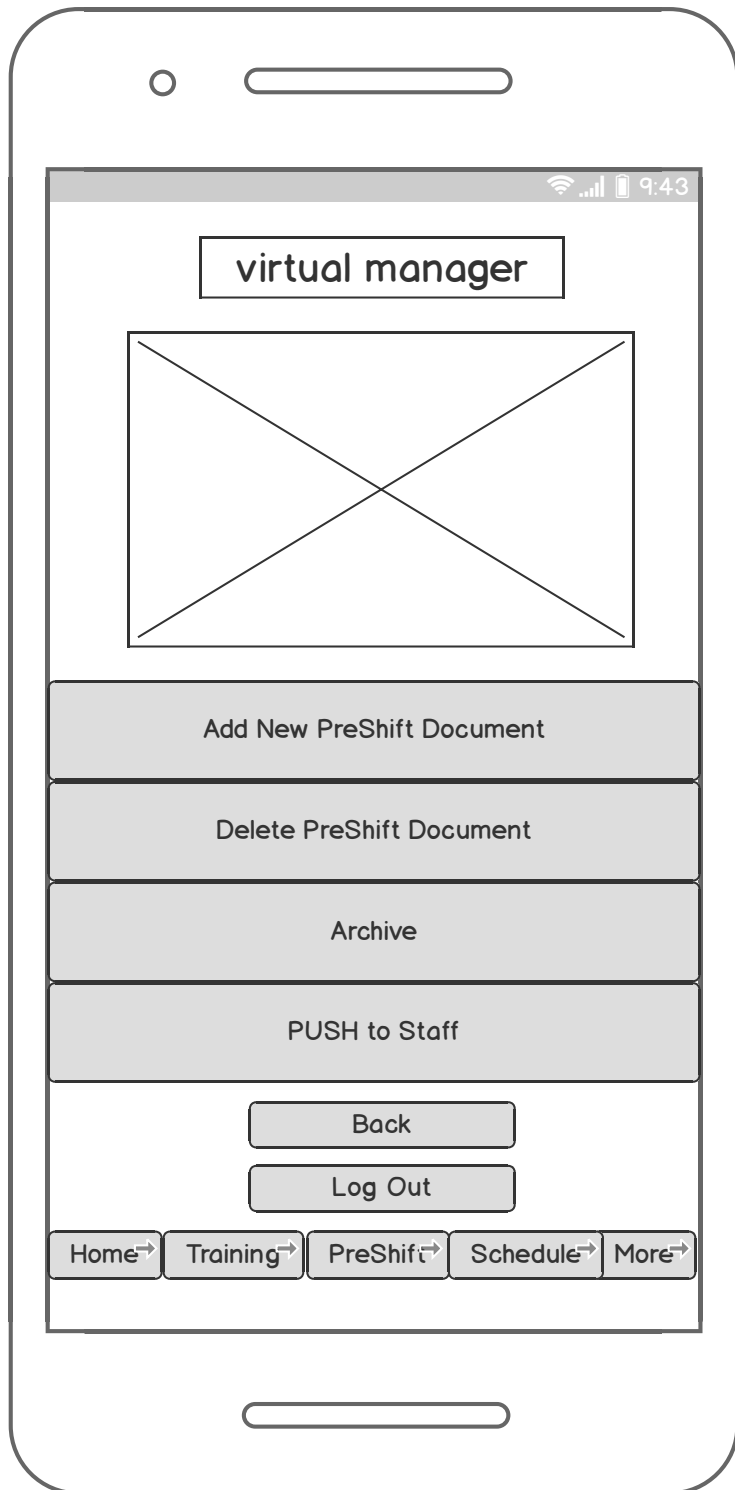

Upload new file brings up an upload box.

Delete File just deletes the current existing file.

Edit File will eventually edit the uploaded spreadsheet.

Back button to the TRAINING sub menu.

PRESHIFT - B

A preshift is simply a daily meeting between MANAGERS & EMPLOYEES. I wish to deliver this digitally via the app.

Image is of the current uploaded "PreShift" document (photo, pdf, word, excel) to be viewed by the USER (EMPLOYEE). This is a pdf, word doc, excel file or photo.

"Add New PreShift Document" button brings up an upload box: pdf, word, excel compatible.

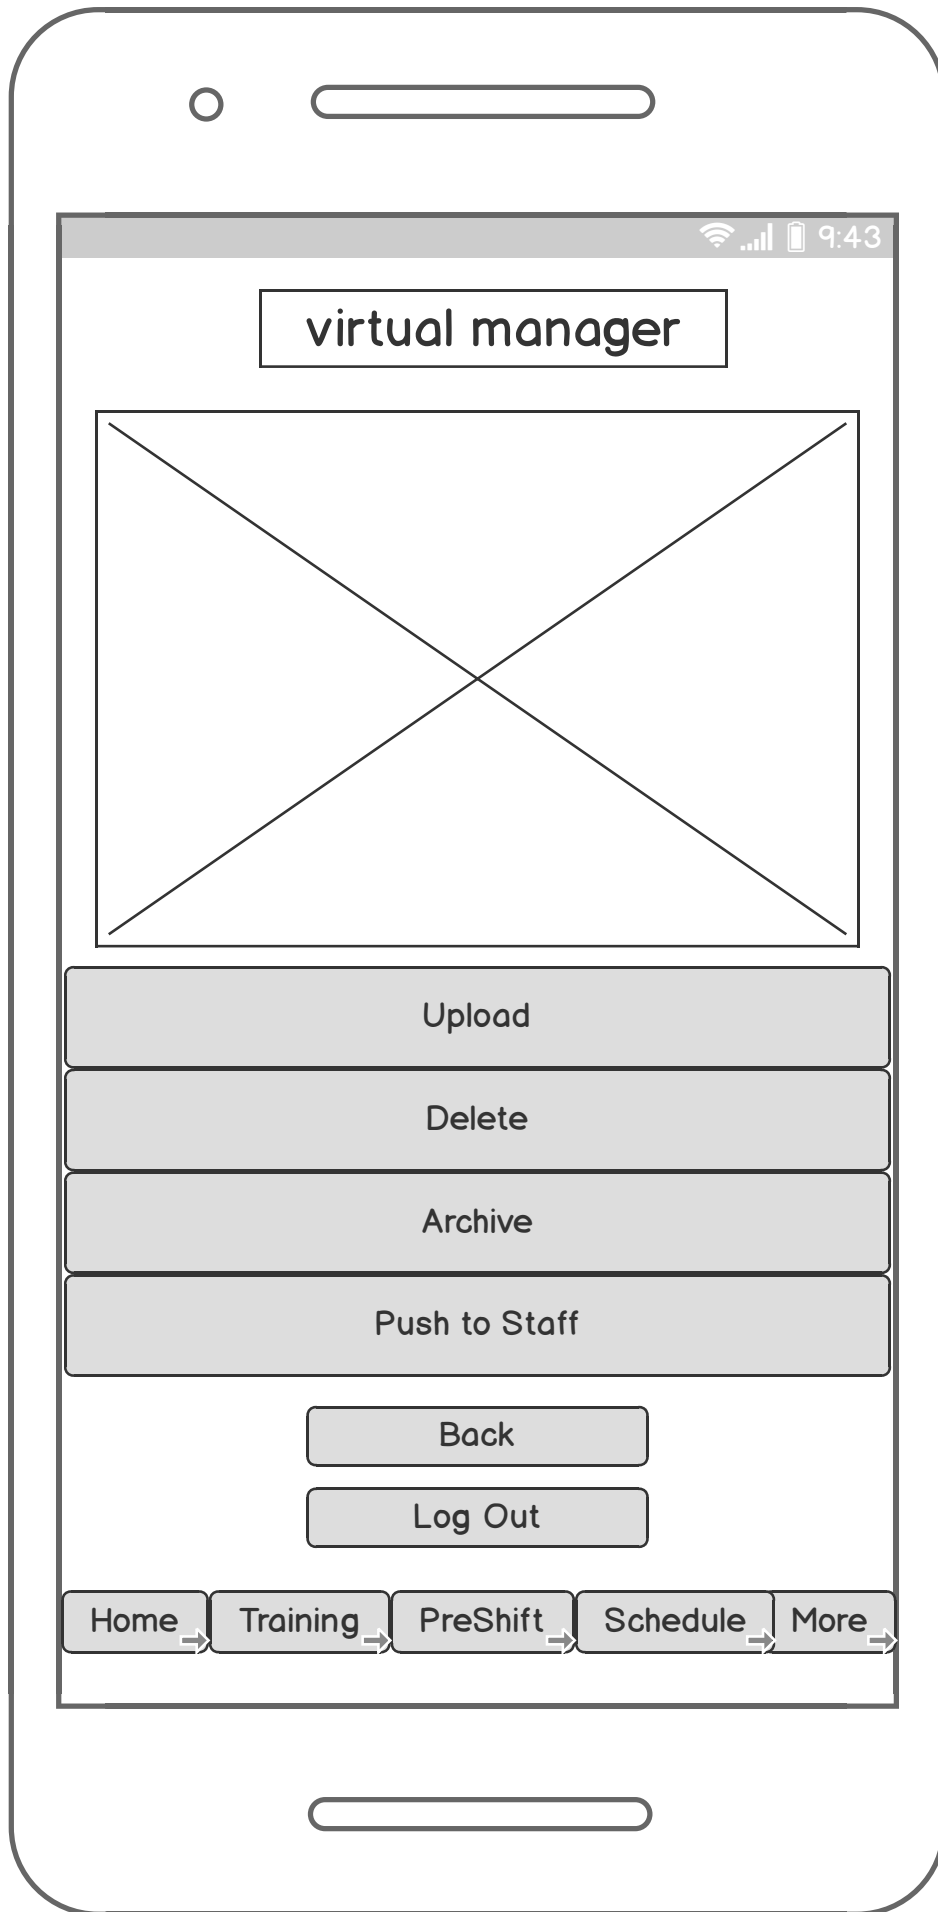

The EMPLOYEE view would be just the file view and back button. The EMPLOYEE would need a dynamic viewer, allowing them to zoom in on the content.

Push to Staff is a must: the key to this app is the ability to push notification additions to the USERS from the ADMIN(s).

The ideal would be a simple sheet; date at the top; 5 fields of data entry in a word format... with the ability to create it, save it in pdf and send it out via the app & email to the USERS (STAFF).

Ultimate goal for version 2: to create a form input that lets the ADMIN upload a picture, pdf or spreadsheet; as well as create a new form (or preshift meeting) from scratch. A simple form input would do, followed by the ability to export it out to the USERS (EMPLOYEES) via the app or email.

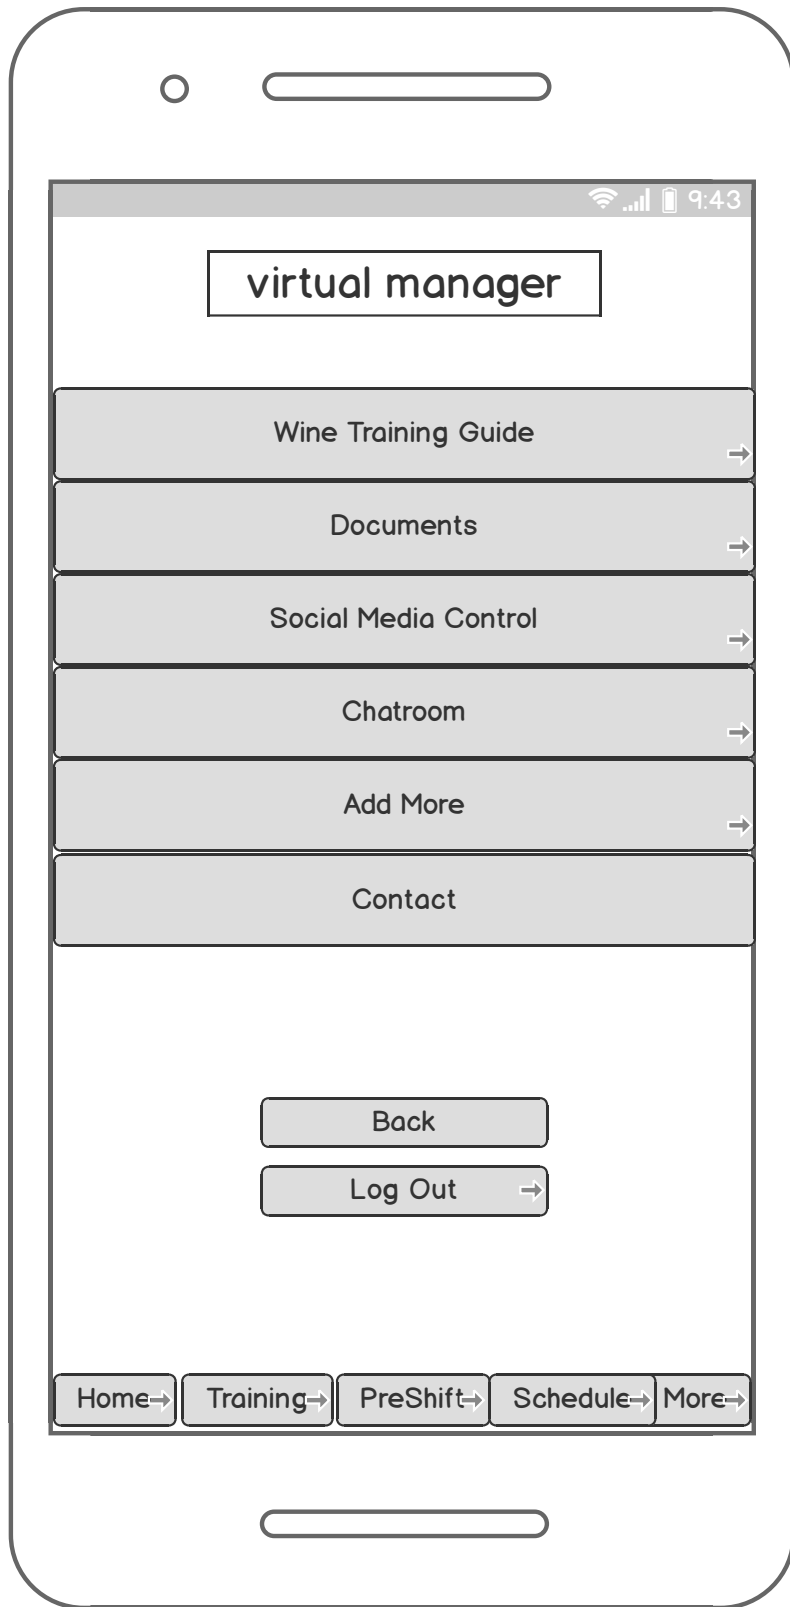

SCHEDULE - C

This page is for uploading a photo, pdf, excel, word document by the ADMIN into the viewer for the USER to see.

For version 1, this will be a picture that is uploaded. There needs to be a camera feature for the ADMIN. There needs to be a dynamic photo viewer for the ADMIN & USER.

MORE - D

The ADMIN can move on to additional screens from here.
These original screens can be hidden and added to manually.

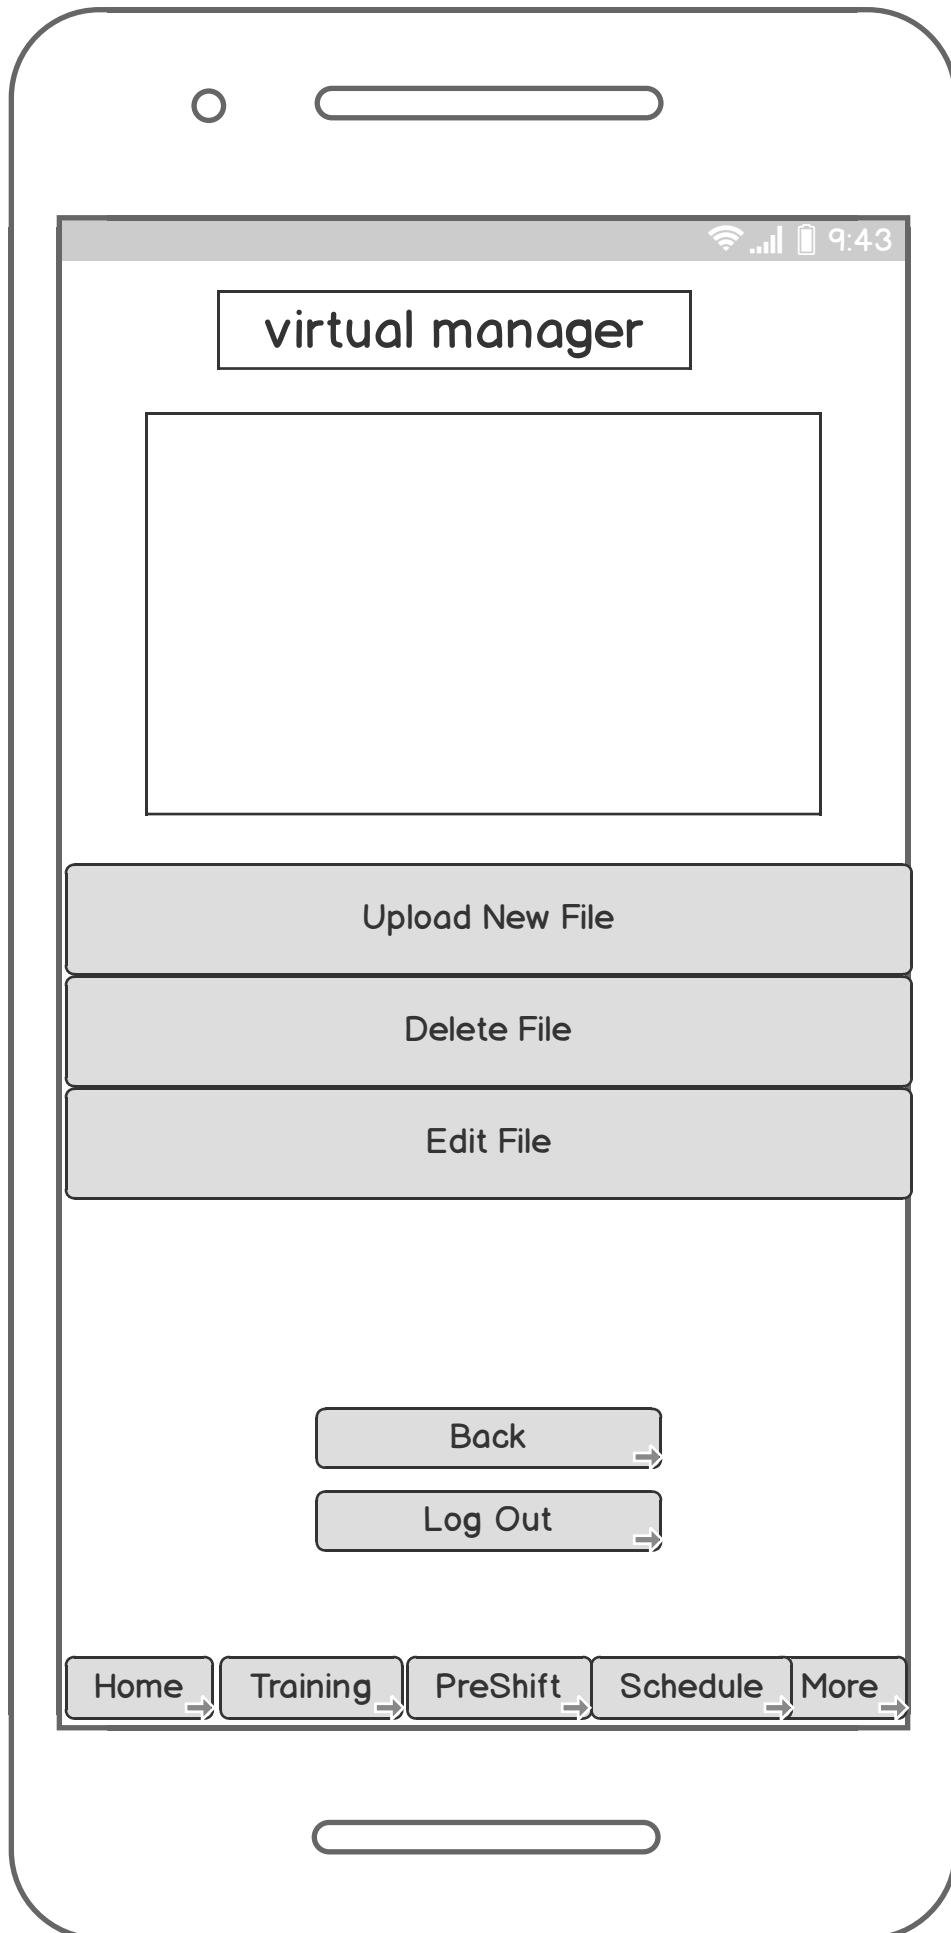

Wine Training Guide is a link to another "training" screen. It can be deleted, hidden or renamed.

Documents area collection of uploaded documents for the USER to view.

Social Media Control is an area where ADMIN can log into and post on social media. ****Dynamic Social Media component needed here****

Add More adds further menu locations.

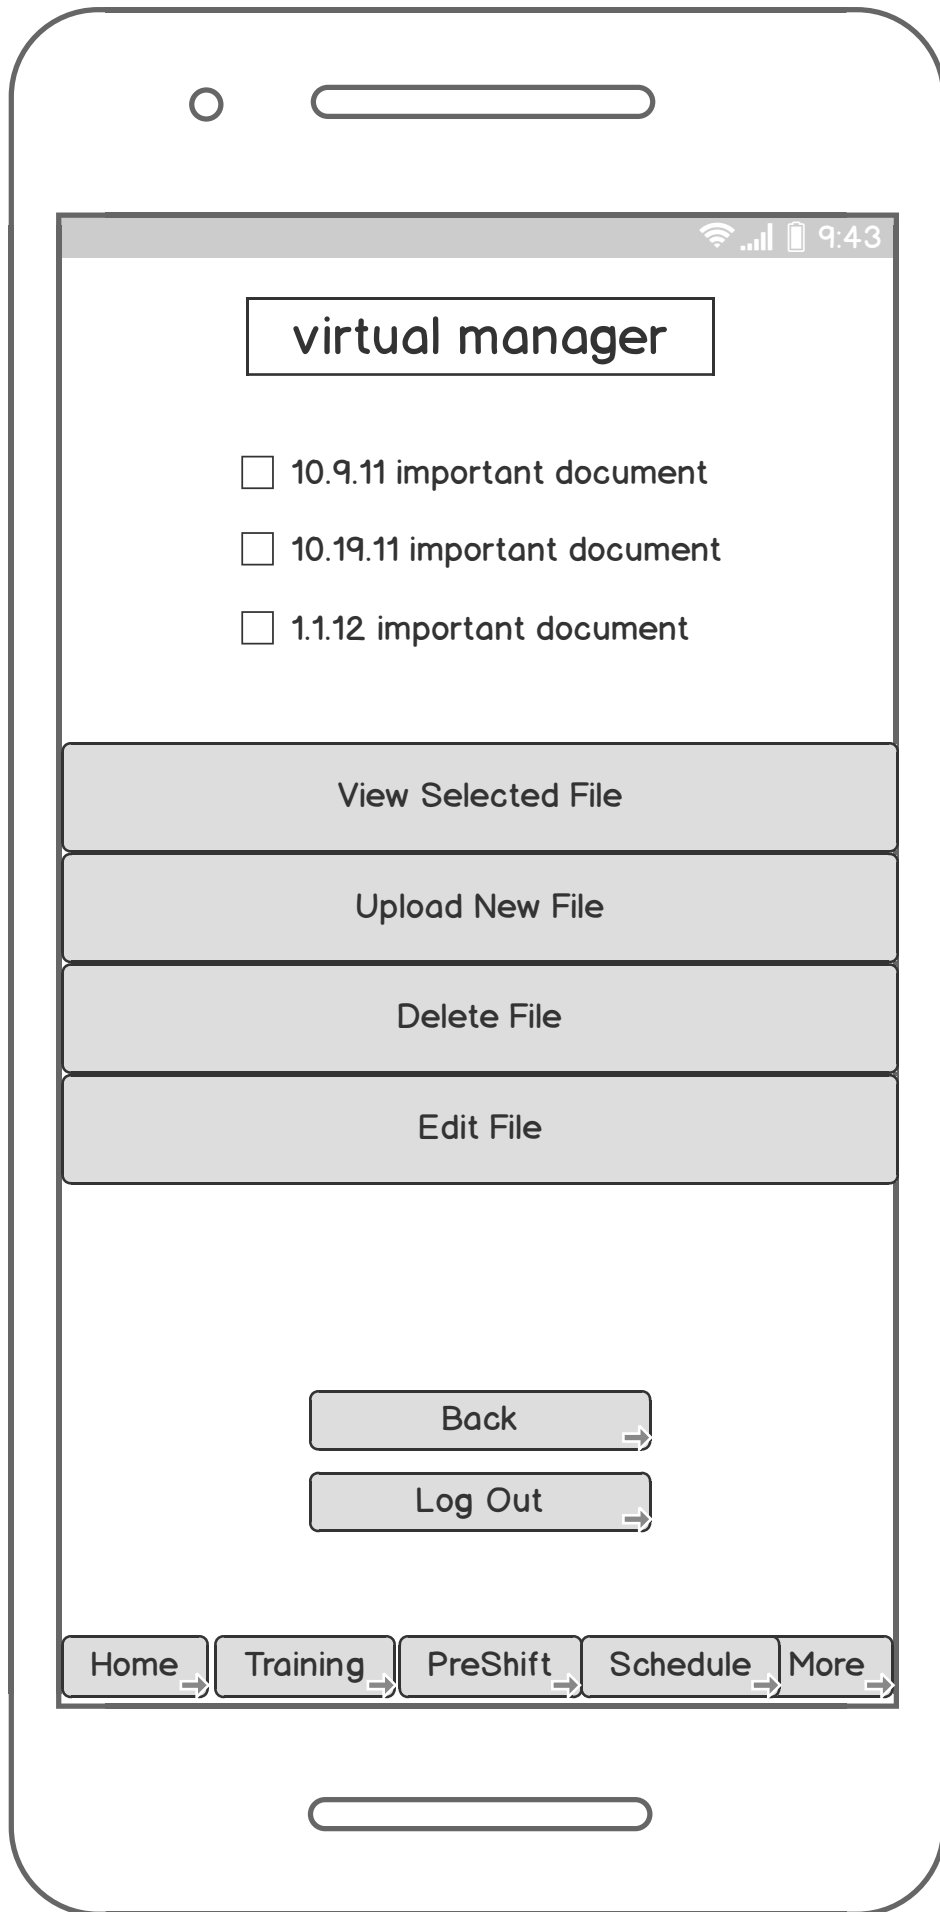

****Chatroom or messaging feature needed: The MANAGER will need some form of communication inside the app with their respective employees. ****

Very similar to the Menu Training 1A1 page.

Uploading a spreadsheet into the app for the USER to view.

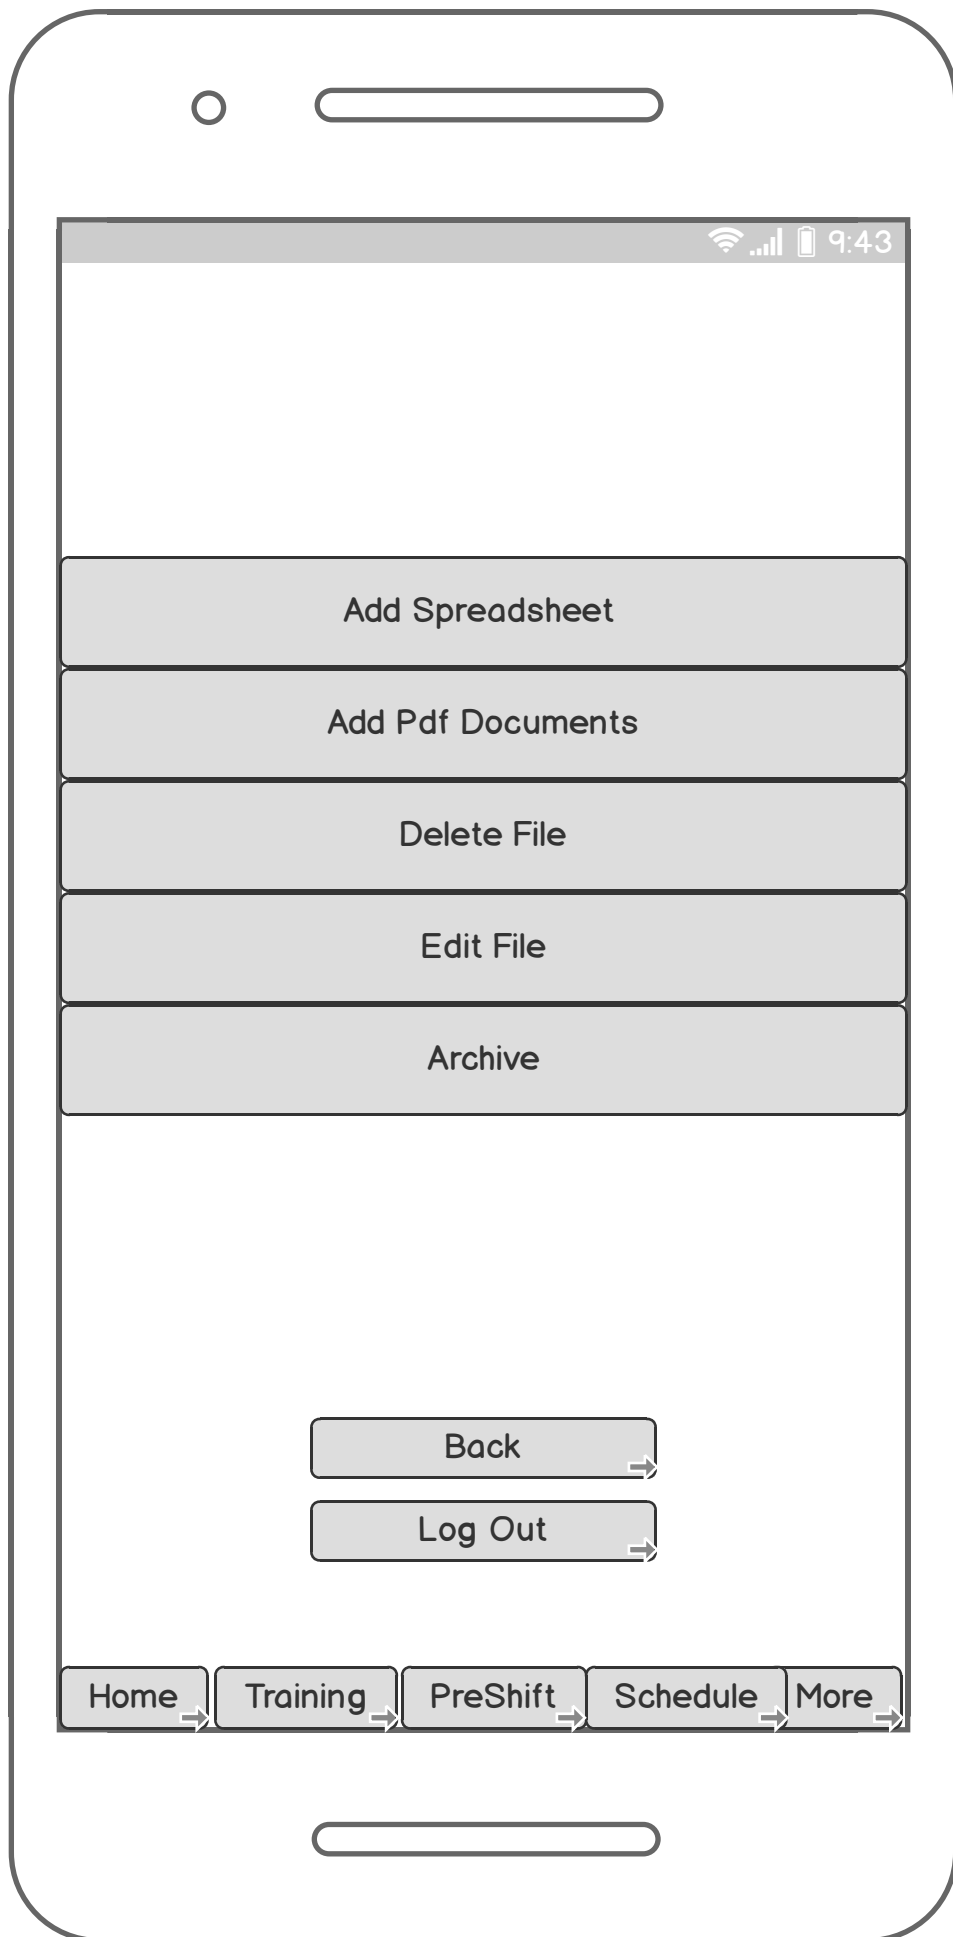

Version 2 of this app should have a spreadsheet template that can be edited and sent to USERS in the app as well as in pdf format via email.

Upload & store pdf's, and other types of files.

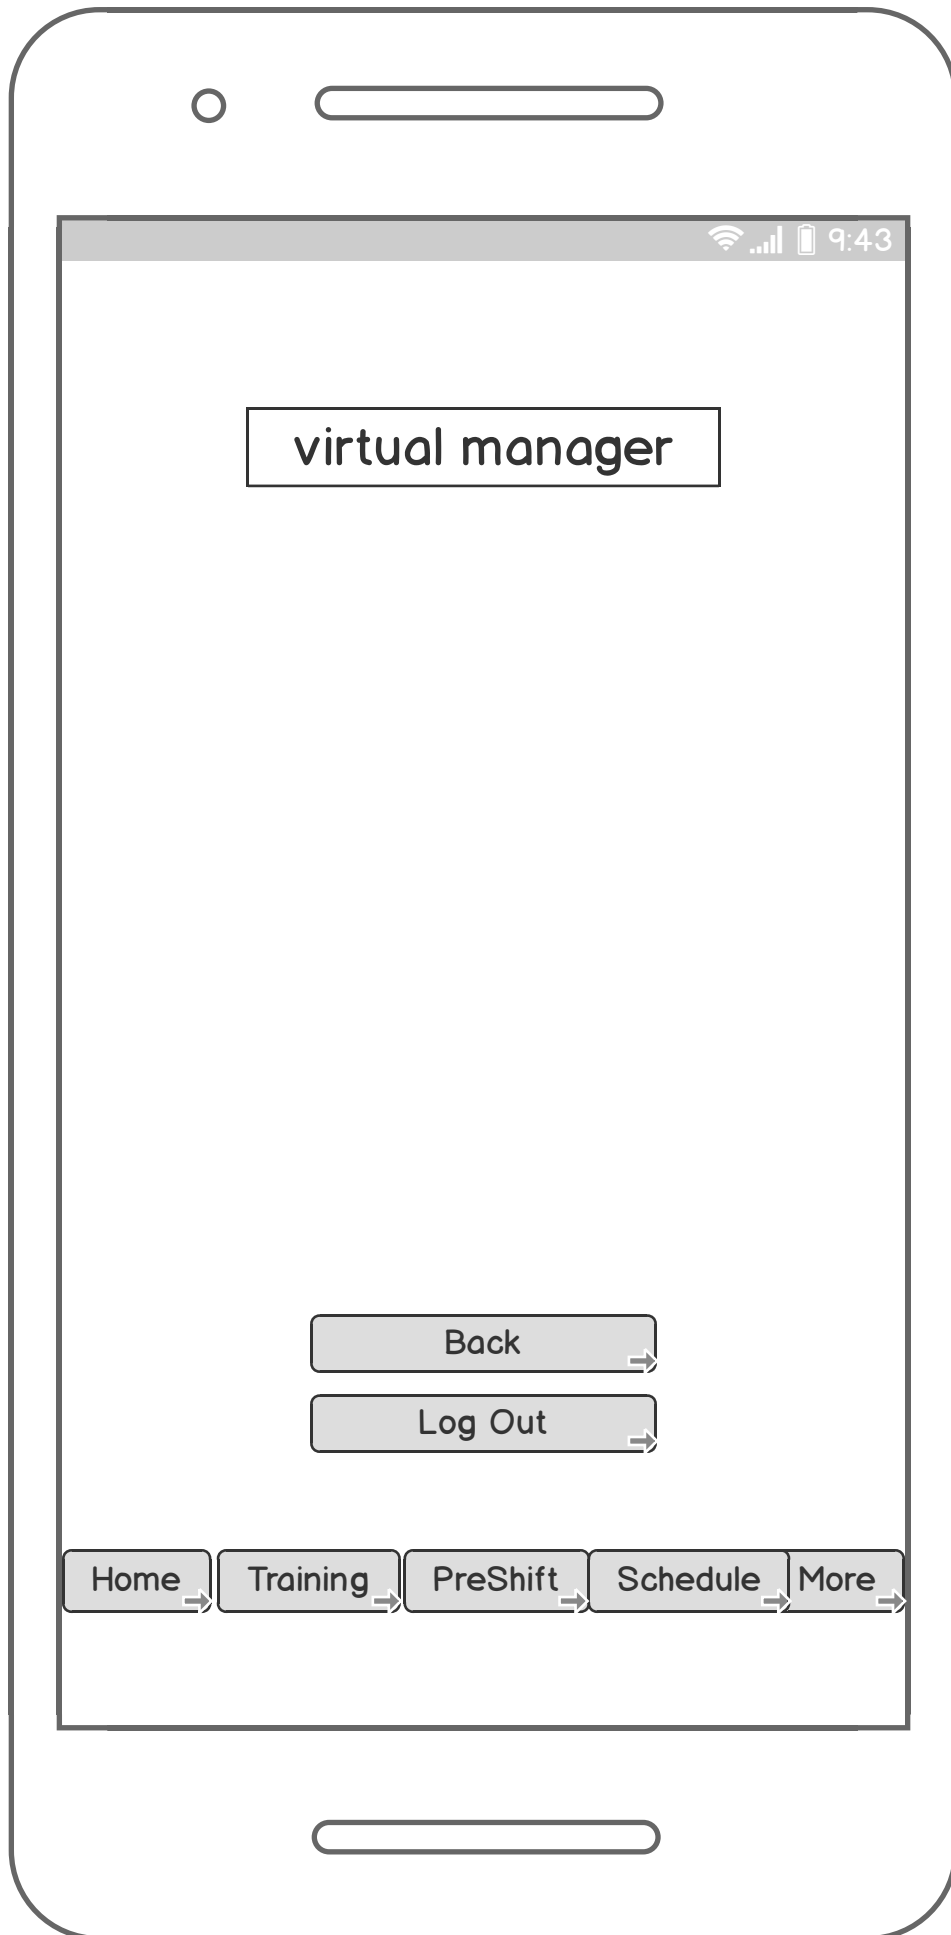

Send to USERS (STAFF) via app & email.

Add More 4D3

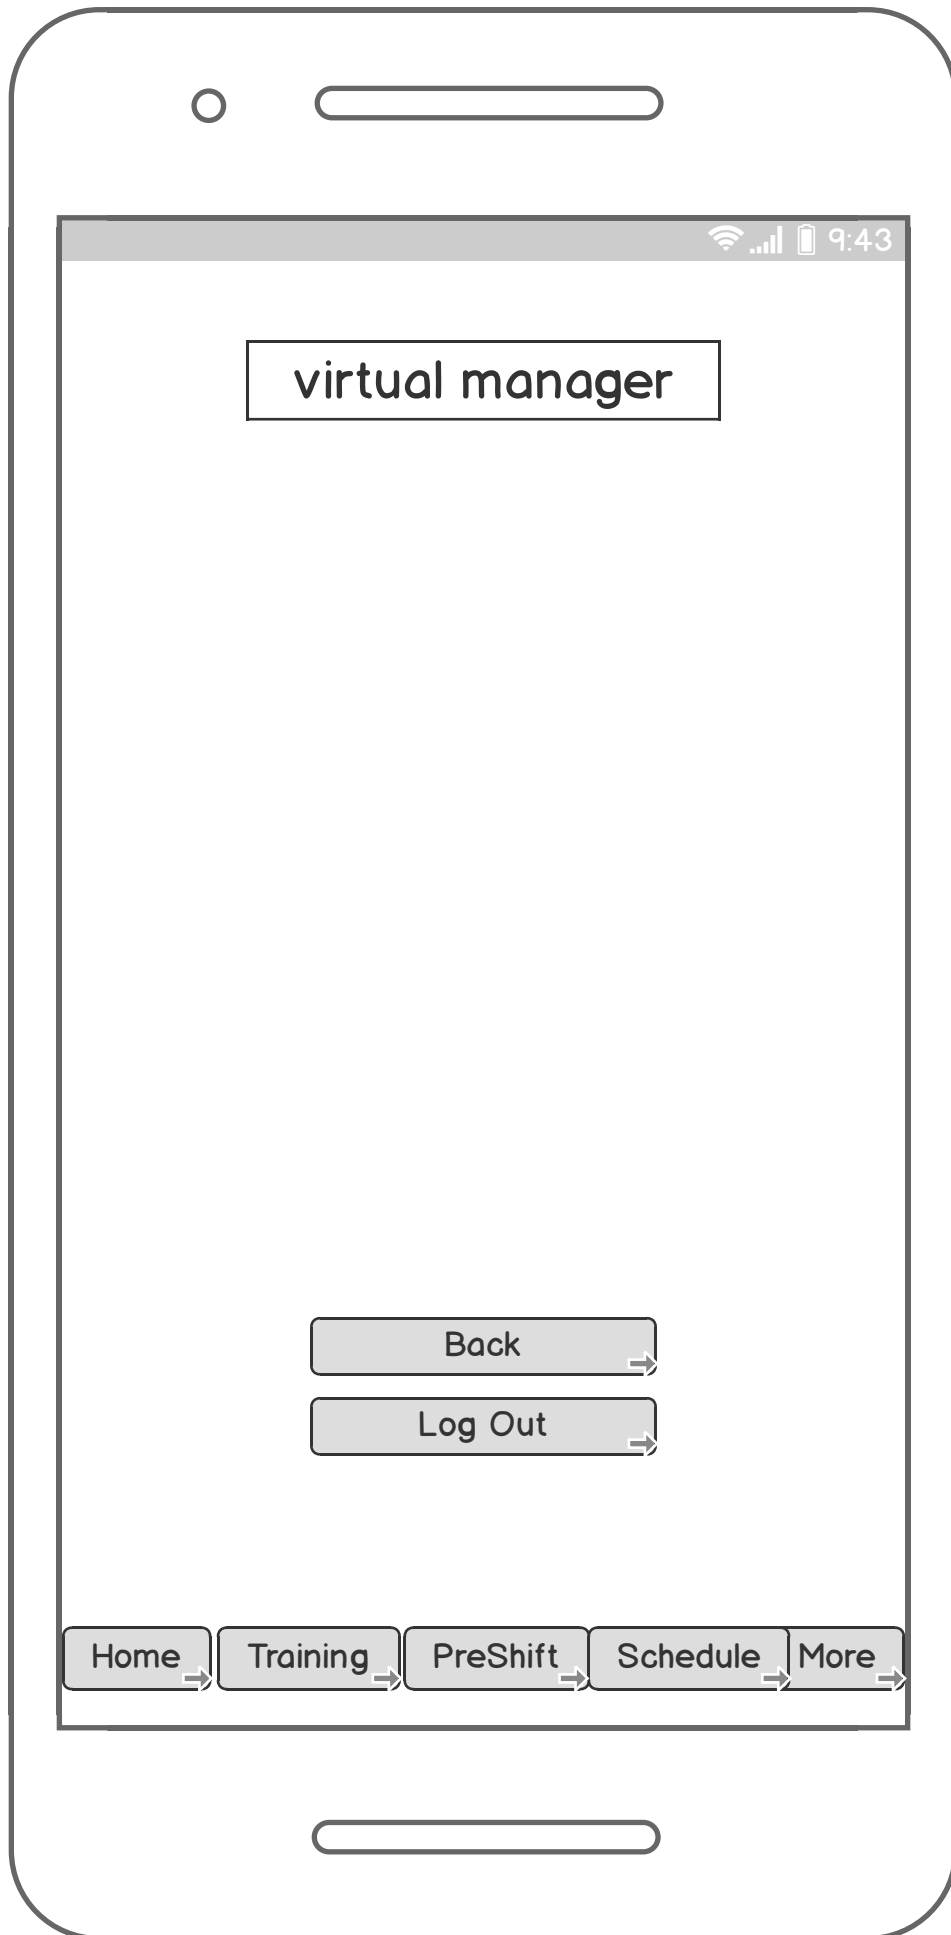

This page lets the ADMIN (MANAGER) add sub pages to the More page.

Social Media Control

This page allows the USER (MANAGER) to log in and post on social media accounts. I am looking to the developer to utilize the most cutting edge technology here for social media posting.

Chatroom

I would love to see and hear ideas for this section. A way to communicate with the staff is a great addition if possible. Something along the lines of a Kik chatroom, nothing fancy.
